Tweak UI 2.10

July 21, 2003

Raymond Chen

What are you talking about?

Tweak UI is part of the Windows XP PowerToys. It was recently updated to version 2.10.

What OS is required?

Windows XP Service Pack 1 (or higher) or Windows Server 2003 (all versions). Not supported: Windows XP RTM, Windows 2000, NT 4, Windows 95, 98, or Me.

Why didn't you make a big announcement? I didn't find out about it until somebody told me.

I don't control the announcements page. I figured word would get out – and it did.

Why is the new Tweak UI so much smaller than the old one?

Leaner installer program.

Are you always this terse?

I'm not sure yet; I'm new at this.
