May 23, 2006

Raymond Chen

I have gazed into my crystal ball and emerged with a prediction for 2006. Revealing my prediction now may influence the event itself, so I will post only the hash for the prediction. I will post the actual prediction at the end of the year.

```
using System.Security.Cryptography;
using System;
class Prediction {
    static void DoHash(byte[] bytes, string name, HashAlgorithm hash)
    {
        Console.WriteLine(name);
        hash.ComputeHash(bytes);
        byte[] result = hash.Hash;
        for (int i = 0; i < result.Length; i++) {
            Console.Write("{0:X2}", result[i]);
            if (i % 32 == 31) Console.WriteLine();
        }
        if (result.Length % 32 != 0) Console.WriteLine();
    }
    static void Main()
    {
        string msg = "prediction goes here";
        Console.WriteLine("length {0}", msg.Length);
        byte[] bytes = (new System.Text.ASCIIEncoding()).GetBytes(msg);
        DoHash(bytes, "MD5", MD5.Create());
        DoHash(bytes, "SHA1", SHA1.Create());
        DoHash(bytes, "SHA256", SHA256.Create());
        DoHash(bytes, "SHA384", SHA384.Create());
        DoHash(bytes, "SHA512", SHA512.Create());
    }
}
```

The output of this program (after you replace “prediction goes here” with the actual prediction, of course) is as follows:

length 45  
MD5  
6D915EC203DF0C918D13B63C4FF7C1EE  
SHA1  
49A2E2B22D27D450890E30D0A34EBA53B454925E  
SHA256
