Voicemail security, even stronger than bank security

devblogs.microsoft.com/oldnewthing/20100303-00

Raymond Chen

Microsoft's telephone department takes security very seriously. Your voicemail password must be at least eight digits long. By comparison, the password for my ATM card is only four digits long. Because voicemail is *that* important, I guess.

(Yes, I know about *two-factor authentication*. I'm writing this only half-jokingly.)
