

How can I move an HTREEITEM to a new parent?

Raymond Chen

Suppose you have a TreeView control, and you created an item in it, and you want to move the `HTREEITEM` to a new parent. How do you do that?

You can't, at least not all in one motion.

You will have to delete the `HTREEITEM` and then re-create it in its new location.

If you want to move an `HTREEITEM` within the same parent (say, to reorder it among its siblings), then you can use `TreeView_SortChildrenCB` and pass a custom sort function that rearranges the children into the order you want.
