

I think this person's monitor is broken: It doesn't know how to render text in capital letters

Some time ago, somebody asked a question about why, when they do 1 and 2, they get extra thing 3. “The extra 3 is there because of the 456 feature. **BUT DO NOT DISABLE THE 456 FEATURE JUST BECAUSE YOU DON’T LIKE 3.** The 456 feature is important, because it ensures that 2 runs to completion. Otherwise, you risk data loss.” The person wrote back, “I disabled the 456 feature, and that fixed it. Thanks!”

It appears that that person’s monitor is broken: It doesn’t know how to render text in capital letters.
