There are no bugs in the I/O manager

Mark Zbikowski told me a story from the early Windows NT days.

He found a race condition in the file system code and went to see the lead developer for the I/O subsystem.

"There are no bugs in the I/O Manager," the developer proclaimed.

Mark walked through the scenario to demonstrate the problem.

The lead developer went to his editor and typed furiously for two or three minutes, ending with a theatrical punch of the `Enter` key.

And he turned to Mark and proclaimed, "There are no bugs in the I/O Manager."
