

Songs with every other beat removed, how to make your own!

Here's how you can create your own:

- Go to [The Infinite Jukebox](#). The original purpose of this site is to make a song infinitely long by finding sections that are self-similar and using them to splice the song into an infinite loop. But we'll use its feature to remove every other beat.
- Pick a song you would like to transform.
- Click the *Tune* button.
- Set the *Branch Similarity Threshold* to the minimum, and uncheck *Loop extension optimization*. These operations create a straight path through the song with no looping.
- Hit the right-arrow key once. This sets the play velocity to 2x, which removes every other beat. (More keyboard shortcuts can be found under the FAQ link.)
- Click *Play* and enjoy.
